SUMMARY

Focused on applied artificial intelligence, I specialize in building intelligent, end-to-end solutions powered by machine learning and agentic AI. I design scalable, production-ready solutions that turn raw data into actionable insights and real-world impact.

PROFESSIONAL EXPERIENCE

- Media and Design Deputy Lead**
Student Advisory Council - CCIS

09/2025 – Present

 - **Manage team** efforts by assigning tasks, reviewing performance, and setting both goals and milestones.
 - **Oversee** the completion of tasks, ensuring that visual identity guidelines are consistently met.
 - Set agendas and **lead** meetings with relevant parties to drive productivity and alignment.
- Zone Manager**
THA Staffing /Part Time

01/2026 – 05/2026

 - **Supervised** teams in critical and prestigious events and conferences for multiple government and private entities.
 - Ensured smooth operations and **managed** coordination of team members and **oversaw** tasks to completion.
- Team Supervisor**
Webook /Part Time

10/2024 – 11/2025

 - **Supervised** teams in popular high-rush events, for several ministries.
 - **Coordinated** directly with clients and operation managers, achieving goals and events success.

EDUCATION

- Bachelor of Computer Science**
Imam Mohammad bin Saud Islamic University

08/2021 – Present
Riyadh

 - Built a strong foundation in **software engineering**, **machine learning**, and **artificial intelligence**, applied directly to deployed projects.
 - Active in extracurricular activities as **Media & Design Deputy Leader** at CCIS Student Council and a graphic design volunteer at Tuwaiq Club, Google Developers Student Club and Information Security Club

SKILLS

Soft Skills

Leadership, Project Management, Teamwork, Communication Skills, Problem Solving

Databases

PostgreSQL, MySQL, MongoDB

DevOps, & Environments

Git, Bash, GitHub, Docker, Spring Boot, Maven, Jupyter, VS Code, Google Colab, Render, Fly.io

Programming Languages

Python, Java, JavaScript, TypeScript, SQL

Specialized Domains

Data Science, Machine Learning, Deep Learning, Natural Language Processing (NLP), Computer Vision, Data Visualization, Agentic AI, AI-Native Engineering

Cloud & Infrastructure

Modal, Cloudflare, Vercel

Model Architecture

CNNs, RNNs, Auto-encoders, Gradient Boosting, Random Forests, Anomaly Detection

Libraries, Tools & Frameworks

PyTorch, TensorFlow, Scikit-learn, LangChain, LangGraph, FastAPI, RestAPI, Next.js, Pandas, NumPy, Matplotlib

LANGUAGES

Arabic

English

CERTIFICATES

- Data Science Bootcamp
- Supervised Machine Learning: Regression and Classification
- Introduction to Data Science in Python
- Calculus for Machine Learning and Data Science
- Python Programming

PROJECTS

Namtheg - Agentic AutoML Platform

Namtheg is an end-to-end **agentic automated machine learning** platform designed with a full **MLOps stack** to automate the entire machine learning pipeline, it was built with **Python, LangChain, FastAPI, Next.js, Modal, React** and **TypeScript**. Users can upload a raw dataset, select a target variable, train a model, and deploy it to a production-ready cloud via API.

3ajib - AI Powered Experience Intelligence

AI-powered tourism intelligence platform built for PwC Empowerthon and securing 4th place, it was built with **React, TypeScript, Supabase** and **JavaScript**, it is aimed at helping Saudi destination owners turn visitor data into actionable insights with an AI demo, ROI calculator, analytics dashboard, and bilingual support.

Cashy - Cash Back Optimizer

An algorithms project built with **Java, JavaScript, HTML** and **CSS**, cashy compares Brute Force ($O(n^m)$) and Greedy ($O(n \times m)$) approaches to optimize cashback across multiple credit cards and spending categories, demonstrating the classic tradeoff between optimality and efficiency.

N-Queens CSP

An AI course project solving the N-Queens problem using three CSP algorithms: Backtracking, Forward Checking, and MAC, it was built with **Java, Spring Boot, Maven, JavaScript, HTML** and **CSS**, it was enhanced with MRV, Degree, and LCV heuristics. Includes a built-in interactive frontend for visualizing and comparing results.

LALR Parser

A compilers course project built with **Java, Spring Boot, Maven, RestAPI, Docker**, and **JavaScript**. The LALR(1) parsing was built from scratch in Java. Given any context-free grammar, the system constructs the full canonical LR(1) item sets, merges same-core states into an LALR table, detects conflicts, and parses input strings with a detailed step-by-step trace.
